ELECTRIFIED VEHICLE MOTOR SERIES

Permanent Magnet (PMAC) Motor for Mobile Systems

Parker

WARNING - USER RESPONSIBILITY

FAILURE OR IMPROPER SELECTION OR IMPROPER USE OF THE PRODUCTS AND/OR SYSTEMS DESCRIBED HEREIN OR RELATED ITEMS CAN CAUSE DEATH, PERSONAL INJURY AND PROPERTY DAMAGE.

- This document and other information from Parker Hannifin Corporation, its subsidiaries and authorized distributors provide product and/or system options for further investigation by users having technical expertise.
- The user, through its own analysis and testing, is solely responsible for making the final selection of the system and components and assuring that all performance, endurance, maintenance, safety, and warning requirements of the application are met. The user must analyze all aspects of the application, follow applicable industry standards, and follow the information concerning the product in the current product catalog and in any other materials provided from Parker or its subsidiaries or authorized distributors.
- To the extent that Parker or its subsidiaries or authorized distributors provide component or system options based on data or specifications provided by the user, the user is responsible for determining that such data and specifications are suitable and sufficient for all applications and reasonably foreseeable uses of the components or systems.
- The products described herein, including without limitation, product features, specifications, designs, availability and pricing, are subject to change by Parker Hannifin Corporation and its subsidiaries at any time without notice.

WARNING

This product can expose you to chemicals including nickel and nickel compounds, which are known to the State of California to cause cancer. For more information go to www.p65warnings.ca.gov

Permanent Magnet AC Motor Solutions for Mobile Systems

Parker's motor portfolio features two exceptional series of Permanent Magnet AC (PMAC) motors designed to meet the diverse needs of mobile applications, including electro-hydraulic pump systems and advanced vehicle performance.

NX8M Motor Series

The NX8M Motor Series is a low power motor specifically engineered for electro-hydraulic pump applications. Its easy implementation allows for direct pump assembly without any mounting interface, facilitating seamless integration. Capable of operating immersed in oil, the NX8M enhances pump performance while minimizing noise levels. This cost-effective solution is ideal for both on and off-road vehicles, providing high torque density and efficiency. When paired with a voltage-matched inverter, the NX8M serves as a reliable first step toward full vehicle electrification. Performance can be further optimized through optional water or oil cooling with cold plates as an option.

GVM Global Vehicle Motor Power Series

The GVM Power Series represents the pinnacle of high power PMAC motors, delivering outstanding performance tailored for vehicle duty applications. With a decade-long legacy and thousands of units sold, the GVM series excels in high power density and speed capabilities, making it suitable for traction and electro-hydraulic pumps (EHP) with peak power ratings of up to 850 kW. Notably, the GVM achieves efficiency levels up to 2% higher than comparable PMAC designs, resulting in energy savings of up to 30% compared to traditional induction technologies. Additionally, the GVM functions as a highly efficient generator, providing versatility across various vehicle platforms.

Both motor series feature advanced cooling systems that enhance performance and simplify design, positioning Parker as a leader in providing the building blocks for vehicle electrification. By developing turnkey technologies, Parker reduces time to market and supply chain complexity, ensuring that customers benefit from innovative solutions that drive efficiency and performance in mobile applications.

Applications:

- Electro-hydraulic pumps
- Traction
- Generators
- Auxiliaries
- Diesel Electric
- Hybrid and Full Electric

Markets:

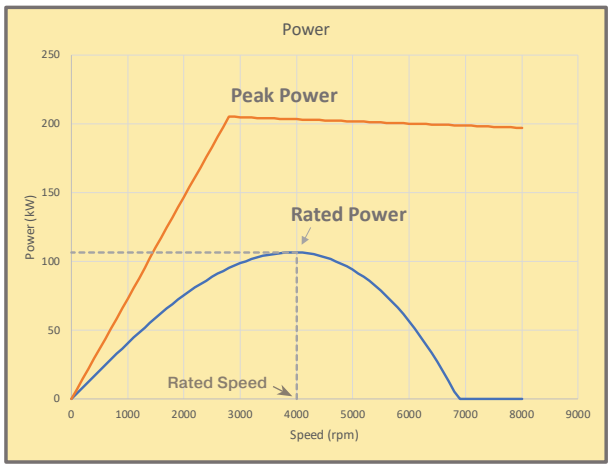
- Construction
- Mining
- Material Handling
- Trucks
- Bus
- Agriculture
- Military

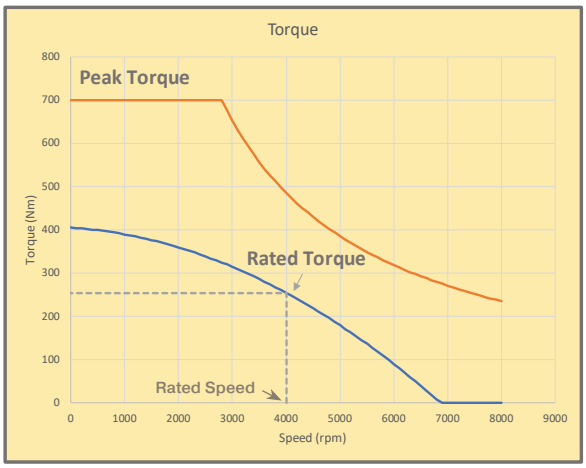
And other off-highway vehicle, autonomous vehicle, and E-Mobility markets

Performance

By selecting the appropriate voltage, rotor length and winding variation, the following parameters can refined to match the vehicle's specific performance requirements:

- Peak torque
- Peak power
- Rated torque
- Rated speed
- Rated power
- Maximum speed

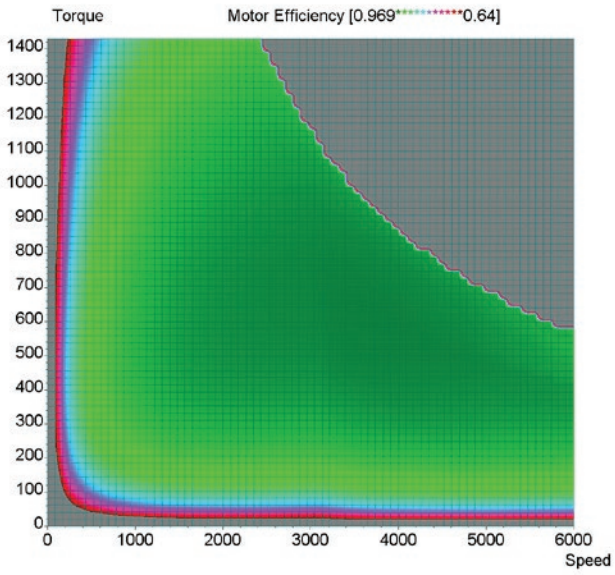




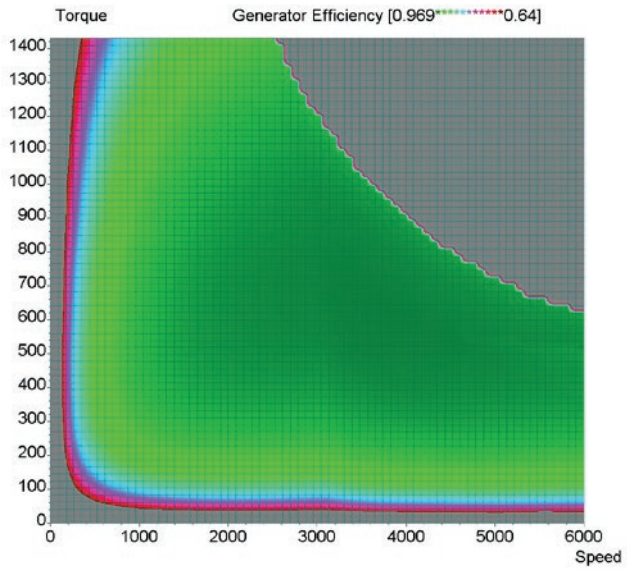
Efficiency

Only when using the best component technology and optimal design characteristics do traction motors/generators and controllers minimize losses both during motoring and power generation (four quadrant mode) increasing vehicle range. Variable speed system allows higher efficiency even at low speed.

Typical Efficiency Maps - Battery Voltage 650 VDC



GVM310-250-BA-2 in motor operation mode



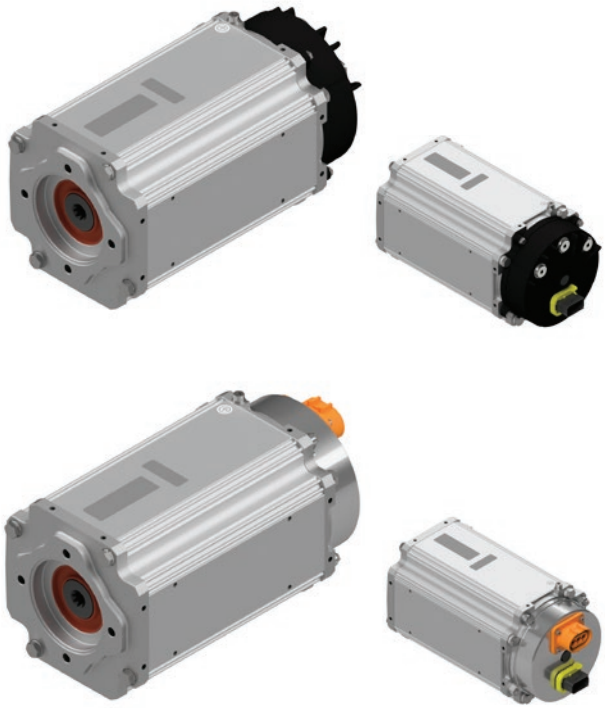
GVM310-250-BA-2 in generator operation mode

Low Power Motor - NX8M

Overview

Available in both low voltage and high voltage versions, the easy to implement NX8M permanent magnet AC motor is the ideal choice for your low power electro hydraulic pump applications, allowing a direct pump assembly without any mounting interface.

It is also capable of working immersed in oil, allowing improved pump performance and lower noise level.
This cost effective solution has been engineered for both on and off-road vehicles.
The high torque density and high efficiency of Parker Permanent Magnet AC (PMAC) motors combined with a voltage matched inverter provide a solution to easily electrify hydraulic pumps , as a first step on the journey to full vehicle electrification.
Performances can be increased through water or oil cooling with optional cold plates.



Product Features

- Easy mechanical mounting with fixing locations on all 4 sides
- For battery voltage up to 800 Vdc
- Membrane breather vent to minimise internal condensation
- Direct SAE A, SAE B, ISO 3019/2 pump mounting interface
- Natural convection cooling; cold plates in option
- Oil immersion capability
- Easy combination with Parker Global Vehicle Inverter (GVI)

Technical characteristics

Model	NX8M
Motor type	Permanent magnet synchronous motor
Battery voltage	24 - 800 Vdc
Max. speed	8000 rpm
Peak power	99 kW
Operating temperature range	-20°C to +60°C
Protection	IP67
Feedback	Resolver, Sin/Cos encoder
Thermal protection	PT1000
Cooling	Natural convection or cold plate
Marking	CE

Applications

- Electro-hydraulic pumps for construction vehicles
- Steering applications
- Hybrid power generation
- Mobile machinery
- Electric Actuators

Available Interfaces

Pilot

Especially for direct coupled shafts it is extremely important to align both of them as good as possible to prevent forces due to misalignments.

Interface size	Pilot diameter in mm
SAE-A	82.63 - 82.68
SAE-B	101.68 - 101.73
ISO 3019/2	80.01 - 80.04

Female pilot centering dimensions and tolerances per ANSI B92.1/ DIN ISO-3019/2

When using a third party pump, make sure the male pilot dimensions fall in between these limits, to guarantee a fretting free operation.

Flange pattern

Interface size	Flange pattern
SAE-A	2-bolt M10 - depth 15 mm
SAE-B	2-bolt or 4-bolt M12 - depth 20 mm
ISO 3019/2	4-bolt M8 - depth 15 mm

Mounting bolt pattern and bolt size per ANSI B92.1/ DIN ISO-3019/2

NX8M Immersed in Oil

Benefits

- Improved motor/pump performances
- Lower noise level

Oil Inside ISO46 60°C

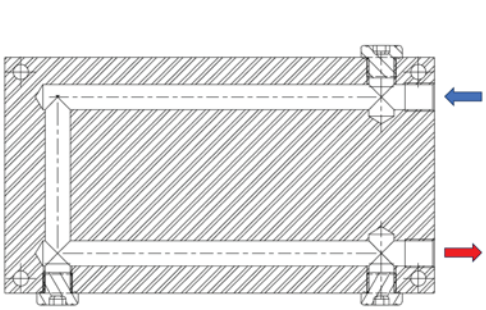
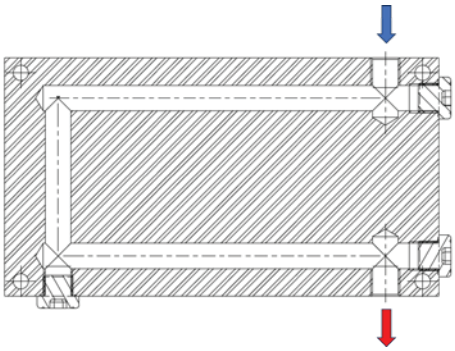
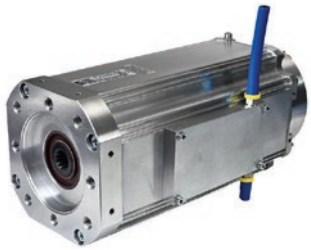
Cooling

Cold Plates

The proposed cold plates can be used in two different ways in accordance with the two pictures hereunder. The flow direction can be reversed if requested in order to facilitate the cooling connection.







Back configuration cooling Inlets/Outlets

Up/Down configuration cooling Inlets/Outlets

Don't forget that when you use hexagonal plug and rotate it, it will need more space and probably touch the motor, especially on the back configuration setting

As example, the cold plate are 15mm thick but a 14mm hexagonal will touch the motor with the back configuration

(1) In case of SinCos encoder, take care to connect the cable shield to the vehicle chassis.
The motor housing must be at the same potential than the drive body.

Global Vehicle Motor - GVM

Overview

Features

- High efficiency
- High power density
- Can be used either as motor or generator
- Operating voltages available from 24 to 800 VDC
- Rare earth magnets allow high temperature operation
- Patent pending cooling
- Custom mounting and electrical connection solutions available for high volume applications

Typical Applications

- Electric motors/generators for hybrid applications
- Electric motors for motorbikes, scooters...
- Traction applications
- Electro-hydraulic pumps for high power cylinders
- Electric power steering
- Auxiliary applications as fan/compressors for air conditionning

Technical Characteristics - Overview

Motor type	**Permanent Magnet synchronous motor**
Magnet materials	Rare earth magnets
Number of poles	12
Batterry voltage	24 to 800 VDC
Power range	up to 350 kW (continuous)
Torque range	up to 2300 Nm (peak)
Speed range	up to 9800 min^{-1}
Ambient temperature[1)]	liquid cooled: -40...+120 °C natural convection: -40...+65 °C
Storage temperature[1)]	-40...+120 °C
Sensor	Resolver or SinCos encoder
Insulation of the stator winding	Class H with potting
Protection	IP67 as standard IP6K9K on request
Random vibration*	0,1 g^2/Hz in frequency range 5...2000 Hz (12 g rms – 3x8h)
Operational shock*	25 g, 11 ms, 3x6 (with 2 directions per axis)
Thermal protection	1 PTC probes and 1 KTY84-130 sensor
Shaft end	Spline shaft (male or female), other possibilities on request
Connections	Terminal box (flying cables for kits); connector for feedback
Marking	UL and CE

[1)] With resolver as feedback

Note: the motors are designed for horizontal operation. In case of vertical installation, please contact us.

In case of axial or radial load on the shaft, please consult the acceptable limits on the GVM technical manual.

Testing and Validation Details*:

Mechanical

- Random and swept sine vibration testing to simulate worst case fatigue exposure to SAE J1455
- Shock and vibration levels exceeding SAE J1455 for unsprung mass applications.

Environmental

- Dust and sand, and gravel bombardment to SAE J1455
- Salt Spray - Fog and Immersion to SAE J1455

Electrical

- HiPot insulation test to IEC 34-1 at 2 x V_{RMS} + 1000 V_{RMS}
- Insulation resistance to ISO 6469-3
- EMC emission and immunity to IEC 34-1 (motor only)

* These tests are valid for GVM210 and GVM310 motors up to GVM310-250. (for bigger sizes please contact us)

A smaller size of GVM142 motor is available, you can check the catalog here :

GVM142 catalogue - North America

GVM142 catalogue - Europe

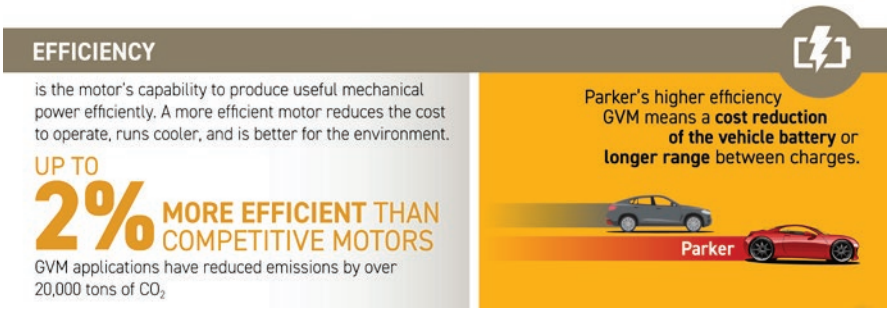
RELIABILITY & DURABILITY

- Long lifetime
- Reduced downtime
- Less maintenance
- Subjected to rigorous environmental testing
- High ingress protection level available
- Ceramic bearings*

*All GVM310 sizes and GVM210 over 150 mm lamination stack length.

EFFICIENCY

- Lower energy consumption for compliance with emerging energy legislations and green initiatives
- Up to 2% more efficient than comparable PMAC designs
- Operates efficiently as motor or generator for maximum energy recovery during braking and deceleration
- Reduced vehicle emissions for smaller CO_2 footprint



- Reduced battery size
- Extended vehicle range
- Lower cost of ownership over life of vehicle
- Reduced thermal losses allow for smaller, less expensive vehicle cooling system

POWER DENSITY

- Reduced space claim
- Less weight for better performance
- Lighter motor can provide larger payload capacity
- Helps vehicle designers meet packaging and performance goals
- Patented cooling helps achieve vehicle performance objectives
- Enhanced productivity in the form of higher vehicle capacity

*The maximum operating speed depends on maximum BEMF accepted by the drive (values given for a Peak Voltage of 1200V)
Max. mechanical speed is 8 000 rpm.
Values in table represent GVM ratings with input cooling liquid at **65°C** (Characteristics are given for an optimal drive/motor association without any limitation coming from the drive). For alternative cooling temperatures please contact us.

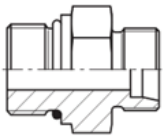
Cooling

Adapter

GE-UNF/UN you need this adapter. It's screwed directly on the GVM manifold and allow you to use the Push-Lok connector.



Please consult catalogue for more information: Tube Fitting Catalogue

Connector

Push-Lock connector.
Available in 3 orientations, straight, 45° and 90°
On this connector, the hoses are simply insert on it.

Corresponding Table

Here is a table summarizing the parts to use for the different sizes of GVM.

Size	GVM 210 adapter	GVM310 Adapter	Straight push-lock	45° push-lok	90° push-lok	Hoses
13mm	GE15L3/4UNFOMDCF	Not available on GVM310	3CA82-15-8	3CE82-15-8	3CF82-15-8	801TM-8-RL
16mm	GE18L3/4UNFOMDCF	GE18L11/16UNOMDCF	3CA82-18-10	3CE82-18-10	3CF82-18-10	801TM-10-RL

Please consult catalogue for more information: Fitting and Hose Catalogue

Hoses

801TM Push-Lok
Fire retardant cover

Construction
Tube: Synthetic rubber
Reinforcement: High-tensile fibre braid
Cover: Fire retardant synthetic rubber
Temperature Range ..... -40 °C up to +100 °C
Exception: Air ..... max. +70 °C
Water ..... max. +85 °C

Recommended Fluids
Air, water, water-oil-emulsions and
water-glycol-emulsions.
Consult the chemical compatibility section on Parker catalog for more detailed information

- Very flexible
- UL approved:
- Class YDQS2 with VW-1 flame test
- UL 94 V0 for cover compound

Part Number	Hose I.D.				Hose O.D.	Pressure Rating				Vaccum*	min. bend radius	weight
						max. working pressure		min. burst pressure				
	DN	Inch	Size	mm	mm	MPa	psi	MPa	psi	kPa	mm	kg
801TM-8-RL	12	1/2	-8	12.7	19.4	2.1	350	8.4	1200	95	125	0.27
801TM-10-RL	16	5/8	-10	15.9	23.1	2.1	350	8.4	1200	51	150	0.28

* The vacuum values listed in the table are vacuum pressure values in kPa. For an absolute value subtract the table value from 101 kPa
Note: When ordering, please replace in the part number XXX with the relavant colour code. Example: 801PLUS-4-BLU-RL

Low Voltage Parker-Curtis Motor Controllers

The F-**Series** low voltage motor controllers from Parker-Curtis are designed specifically for mobile applications requiring precise motor control, integrated vehicle logic, and robust safety features. Supporting battery systems typically ranging from 12 to 144VDC, these controllers combine power electronics with advanced control software to manage traction, pumps, steering, and auxiliary functions.

With compact designs, high efficiency, and proven reliability in harsh environments, Parker-Curtis motor controllers enable OEMs to simplify system architecture, reduce installed cost, and deliver smooth, responsive machine performance.

Technical Data

High Voltage Parker-Curtis Motor Controllers

The **GMI Series** delivers advanced high-voltage motor control solutions designed for next-generation electric and hybrid mobile machines. Engineered for demanding off-highway and industrial environments, GMI controllers provide precise traction and work-function control while enabling scalable electrification across vehicle platforms.

Supporting battery systems up to 750V class, the GMI family combines high-efficiency power electronics, integrated functional safety architecture, and flexible vehicle system control in compact, rugged packages optimized for mobile applications.

From compact auxiliary electrification to high-power traction systems exceeding 150 kW peak power, GMI controllers allow OEMs to standardize on a common control platform across multiple machine types—reducing integration complexity while improving performance, efficiency, and reliability.

Technical Data

Model		GMI 070	GMI 100	GMI 020
Operating Voltage Range (without derating)		150–500VDC[1]	150–800 VDC[1]	150–800 VDC[1]
Operating Voltage Range (with derating)		500–525VDC	800-825 VDC	800-825VDC
LV Supply Voltage Range		12–24 VDC	12–24 VDC	12–24 VDC
Current Range[2]	Continuous, 60 min.	100-150Arms	75-125Arms	27Arms
	S2, 2 min.	200-300Arms	140-200Arms	45Arms
Operating Temperature		–40°C to 50°C	–40°C to 50°C	–40°C to 50°C
Weight		7.2 kg	6.5 kg	4.1 kg
Dimensions (mm)		315 x 290 x 98	309 x 278 x 92	223 x 158 x 90.5
Ingress Protection		IP6K9K/IP67		
EMC		EN12895, ISO 13766-1 and ISO 13766-2		
Safety		EN 1175-1:2025 and EN ISO 13849-1:2023		
Environmental & Chemical		ISO 16750-3 & -4 and ISO 19014-3		
UL		UL583		

[1] Overvoltage protection cuts back the regenerative braking (regen) current when the voltage is above 525/825 VDC.

High Voltage Global Vehicle Inverter - GVI

Safe, Smart and Scalable, the second generation of GVI mobile inverters provide a single-family solution for both traction and work function applications, on and off-road. The robust WEG cooled housing is rated up to IP6K9K and altitudes of up to 5000m.

Plug and socket connections on the front face simplify installation, and the comprehensive configuration software tool combined with both CANopen and J1939 interfaces gives system design flexibility.

Designed for pairing with the Parker GVM range of PMAC mobile motors, the series has the perfect balance of efficiency, performance and reliability. GVI integrates seamlessly with Parker's IQAN range of products, and with Electro-Hydraulic Pump (EHP) applications in mind, the GVI features onboard I/O tailored to hydraulic work functions.

Technical Data

Model	GVI125	GVI250
Supply Voltage	200-750V DC	
Continuous Current (1hr)	180 A	360 A
Overload	130% for 60 seconds	
Continuous Power	125 kW	250 kW
Switching Frequency	1.5 - 8 kHz Variable [1]	
Temperature Range	-40˚C to 65˚C	
Altitude	0-5000m	
Housing	IP67/IP6K9K	
Cooling	WEG 50:50 -20˚C to 65˚C	
Output Frequency	0-1333Hz [2]	
Auxiliary Supply	8-32V DC	
CAN Interfaces	CANopen, J1939, DM1, UDS [3]	
Compliance	EN61800-5, IEC61800-3, ISO13849, ISO6469, R10, R100, CISPR25 Edition 4, Class 3, ISO11452, ISO7637, 61000	

[1] Higher switching frequencies may require current derating
[2] Software limited to 590Hz
[3] 125 baud – 1M baud, with/without termination

Configured ePump

Configured ePumps are designed and optimized for hybrid electric and all electric mobile applications. Configured ePumps consist of a GVM motor, directly coupled to an hydraulic pump and controlled by a high performance mobile hardened GVI inverter.
Parker's configured ePumps provide the lowest possible installed cost and highest efficiency while still maintaining superior reliability in the most demanding applications.

Please consult ePump catalogue for more information:
Catalogue ePumps North America
Catalogue ePumps Europe

Modular Electric Power Take Off (ePTO)

- Compact enclosed assembly for optimal vehicle integration
- Customised plug and play system
- Multiple control modes
  - Pressure / Flow
  - Electric load sensing
- Reduce complexity with "one-stop shop" supplier
- Low energy consumption with efficient solution - operation on demand

Please consult ePTO brochure for more information: Brochure ePTO

Thermal Management

The QDC cooler range, whether 24 VDC or 600 VDC ties in perfectly with Parker inverters and motors ensuring greatest efficiency for all electrified applications.

- 20-30% more efficient cooling matrix
- Low noise fan and fan housing
- High performance fan drive with integrated inverter
- Fan speed control from 1200 RPM to 4750 RPM
- Air free fluid
- 50-60% less space and power consumption
- Silent operation
- Compact design - low space claim
